Example VIII: Mixture Solution

B/ The formulations of Examples VIII, IX, X, XI, and XII include aqueous soluble bismuth chelate. In each of these examples, solution dosage forms were prepared by adding an amount of an ammonium salt of bismuth sulfate sufficient to provide the indicated amount of bismuth sulfate.

Please **amend** the paragraph beginning at page 53, line 6 and ending at page 53, line 14 with the following rewritten paragraph:

B/ Solution dosage forms that were prepared according to the following guidelines did not show any precipitation at any pH within the selected desired range of pH values.

UDCA	5 g
CDCA	5 g
Bismuth sulfate	5 g

Corn syrup solid 260 g

The UDCA and CDCA were first dissolved in 1.5 mL of a 1N NaOH solution. Next, to the resulting clear solution were added the bismuth sulfate and 150 mL of water. Then, the corn syrup solid was added portion by portion with vigorous agitation. The resulting solution was titrated to pH 4 with citric acid. Purified water was added to adjust the total volume to 1.0 L.

Please **amend** the paragraph beginning at page 54, line 1 and ending at page 54, line 10 with the following rewritten paragraph:
